

INTERNAL — DOCUMENT 00

Cross-Verification Report

Reconciliation of the six draft policy documents against each other and against the platform as actually built, with every conflict, its resolution, and the work outstanding before launch.

COMPANY	SoftSkills Engineering
PLATFORM	SoftStore.pk
PREPARED	1 August 2026
VERSION	1.0
CLASSIFICATION	Internal / Confidential

1. Why this report exists

Six draft documents were supplied for the SoftStore.pk launch. They were checked against **each other** and against the **software as actually built**. This report lists every conflict found, the decision taken, and what still needs action before the documents can be signed or published.

HEADLINE

The drafts contained one internal arithmetic error, five factual conflicts between documents, and described roughly a dozen capabilities the platform does not currently have. All are resolved below. Two items still require your decision.

2. Source documents reviewed

SOURCE FILE	STATUS	OUTCOME
Softstore_Terms_and_Conditions.doc	Draft	Superseded by Document 01
Softstore_Privacy_Policy.doc	Draft	Superseded by Document 02
Softstore_TCs_For_Sellers.doc	Draft	Superseded by Document 03
Softstore_Seller_Policies.doc	Draft	Superseded by Document 04
Softstore_Sales_Commission_Structure.doc	Draft	Superseded by Document 05
Softstore_Terms_of_Reference.doc	Draft	Superseded by Document 06

3. Conflicts between documents

3.1 Commission rate — three different answers

SOURCE	STATED RATE
Commission Structure draft	1.5% – 15% by category
Verbal instruction during review	5% – 10%
Live software (<code>commission_rates</code>)	5.00% flat, single row

RESOLVED

The category table in the Commission Structure draft is adopted as authoritative. It is a considered schedule that prices by margin, which is how comparable marketplaces operate. The software must be updated to match — see §5.

3.2 Payment gateway fee — the worked example contradicts the stated rate

Section 2 of the draft states a gateway fee of **2.5% – 3.5%**. The worked example in section 4 then applies **1.5%**, which is outside its own stated range.

RESOLVED

Gateway fees are removed from the fee schedule entirely. The platform does not currently process card or wallet payments — every marketplace order is cash on delivery — so there is no gateway fee to charge. It returns to the schedule when a gateway is integrated.

3.3 VAT base — the worked example contradicts the stated base

Section 2 states VAT applies *"on the commission amount, not the total product price"*. The worked example then computes 16% of PKR 1,150, which is commission (1,000) *plus* the gateway fee (150). Applying the stated rule gives a different answer:

LINE	AS DRAFTED	PER STATED RULE
Product price	10,000	10,000
Commission @ 10%	1,000	1,000
Gateway fee	150	150
VAT @ 16%	184 (<i>on 1,150</i>)	160 (<i>on 1,000</i>)
Seller payout	8,666	8,690

ACTION REQUIRED

A PKR 24 difference per PKR 10,000 order sounds small; across ten thousand orders it is PKR 240,000. Tax treatment of marketplace commission must be confirmed with a Pakistani tax practitioner before the first payout run. Document 05 states the commission only and explicitly defers the tax computation.

3.4 Return window — stated three ways

- Commission Structure: *"standard 7-day return window"*
- Terms and Conditions: *"e.g., 7 or 14 days"*
- Seller Policies and Seller T&Cs: *"7-14 day" / "typically 7-14 days"*

RESOLVED

Seven days, all categories. One number, stated identically in every document and on the website. A return window a seller cannot predict is a return window they will dispute.

3.5 Uptime commitment

The Terms of Reference commits to **99.9% uptime**. The platform runs on shared cPanel hosting, which cannot support that commitment, and the published Terms and Conditions therefore offer no uptime percentage.

RESOLVED

The uptime figure is removed. Document 06 states an availability *aim* and commits to advance notice of planned maintenance, which is deliverable. Publishing a service level you cannot meet creates a liability with no upside.

3.6 Legal entity naming

The drafts variously use *Softskills*, *Softskills Engineering* and *Softstore* as though interchangeable, including within a single sentence in the intellectual-property clause.

RESOLVED

SoftSkills Engineering is the legal entity and contracting party. **SoftStore.pk** is the platform it operates. Every document now uses them consistently and defines both on first use.

3.7 Settlement cycle

The Commission Structure draft specified a *bi-weekly (15-day)* cycle, which drifts against calendar month-ends and is awkward to reconcile against monthly accounts.

RESOLVED

Payouts run on **two fixed calendar dates**: the 15th and the last day of each month. Predictable for the seller, and it closes cleanly against monthly books.

3.8 Effective date

Drafts carry an effective date of 1 August 2026, which precedes the 14 August launch. A policy cannot take effect before the service it governs exists.

RESOLVED

All documents take effect **14 August 2026**, the launch date.

4. Conflicts between the documents and the built software

The drafts describe a platform more complete than the one that exists. Under the instruction to document only what exists today, the following were removed from the published documents. Each returns when it ships.

DESCRIBED IN DRAFTS	BUILT?	HANDLING
Bi-weekly payout cycle via IBFT	No	Payout runs are not implemented. Document 05 states settlement is processed manually against the commission ledger at launch.
Card and mobile-wallet payments	No	Removed. Cash on delivery is the only marketplace payment method at launch.
Courier integration (TCS, Leopards, Trax)	No	Removed. Sellers arrange their own dispatch; the platform records the order and delivery status.
Seller-buyer chat portal	No	Removed. Contact is through platform support.
Quality-check process on returns	No	Reworded: returns are reviewed by support, no automated QC is claimed.
Cancellation / late-dispatch / return rate thresholds	No	These metrics are not measured. Retained as stated <i>expectations</i> , not as automatically enforced penalties.
Financial penalties (PKR 100–500 per cancellation)	No	Removed. Charging a penalty the system cannot compute or collect is unenforceable.
iOS and Android buyer apps	No	Removed. The web marketplace and the seller Android POS exist; there is no buyer app.
VAT / provincial tax computation	No	Removed from the fee schedule pending professional advice (§3.3).
Seller training academy	No	Moved to Document 06 as a planned deliverable, not a seller entitlement.
Seller performance dashboard / store analytics	No	Commissioned for build; see Document 06 §5. Not referenced in seller-facing terms until it ships.
Category commission rates	No	The software charges one flat rate. Document 05 is authoritative; the software must be updated to match — see §5.
Cash on delivery	Yes	Retained.
Seller verification (CNIC / business documents)	Yes	Retained. A review queue exists.
Shared inventory across counter and storefront	Yes	Retained. This is the platform's distinguishing capability.

DESCRIBED IN DRAFTS	BUILT?	HANDLING
Prohibited items policy	Yes	Retained.

5. Software changes required before launch

BLOCKING

These must be completed before the documents below can be honoured. Until then the published fee schedule and the software disagree, which is the single worst outcome for a marketplace's credibility.

- Seed the category commission rates.** `commission_rates` holds one flat 5.00% row. Document 05's eleven category rates must be loaded, effective-dated to 14 August 2026.
- Charge commission at all.** At the time of review the checkout path did not record commission on any marketplace order; the ledger held no entries against live orders. This is under active repair.
- Verify buyer email before checkout.** Orders can currently be placed without any email verification, despite the verification service existing and being unreachable from any route.
- Remove the fabricated stock default.** The checkout path assumes **100 units available** when no stock record resolves, which will sell goods that do not exist — the precise failure the platform's positioning promises to prevent.
- Reconcile the three stock sources.** 19 of 134 live products currently disagree across the product record, the inventory record and the ledger sum.
- Build seller store analytics.** No page-view or product-view telemetry is captured today. Marketing material already shows this feature.

6. Open decisions

#	DECISION NEEDED	WHY IT MATTERS
1	Tax treatment of marketplace commission — is the platform required to charge and remit sales tax on its commission, and on what base?	Determines the seller's actual payout. Needs a Pakistani tax practitioner, not an engineering decision. Blocks the first payout run.
2	Settlement cycle at launch — resolved : payouts on the 15th and the last day of each month.	Now fixed in Document 05 \$5. Operated manually until payout automation ships; the dates are a firm commitment either way.

7. Recommendation

Documents 01–06 are ready to issue once the two open decisions above are settled and item 5.1 (seeding the category rates) is complete. Items 5.2 to 5.6 are correctness defects in the software rather than defects in the documents, but 5.2, 5.3 and 5.4 should be closed before taking public orders on 14 August.
